CAJUN DOES POWER

WHATEVER THE TASK, WE DO IT RIGHT.

Power

Diversity is the key to success in today's construction market and once again Cajun has moved into the forefront in the power industry. With a client list consisting of major utility suppliers, major design engineering groups and others, Cajun has proven to be a trusted partner to the electrical power magnets. From grass roots construction to the revamping or expansion of existing facilities, our team of professionals can provide clients with a turnkey solution. Give Cajun the opportunity and let us show you why we continue to be recognized by national organizations as a proven industry leader.

CAJUN
CONSTRUCTORS, INC.
Vision Born of Experience.

Power in the Swamp

Cajun marine projects feature a unique dimension with the addition of power line structures through waterways and marshes for our electrical clients. Knowing that safety, quality, and communication are critical to our clients, Cajun will deliver.

Substation Construction Grass Root/ Additions

Cajun's skilled craftsmen are capable of building a new substation from virgin soil, consisting of all site work, piling, or drill piers—whichever is specified. All foundation grounding, conduit and concrete installation along with structural steel and equipment setting are performed by in-house personnel. In addition, specialty safety training allows us to perform the same services in energized facilities.

Transmission Line Erection

Whether it's vibratory casings or concrete poles—on dry land or in the middle of the wetlands—Cajun will serve your needs in transmission line construction. Pouring concrete by helicopter, dressing out poles and setting in place...it's all in a days work for a Cajun crew.
